

SNLS - VLT: catalog of non SNIa MOS objects

Balland et al (2018)

Table 1: Catalog of redshifts and identifications of the non-SN Ia objects measured in MOS mode at the VLT during the SNLS survey. We use the ID column to distinguish between host galaxies that were targeted after the transient had faded from view, live transients (using the labels SNIbc, SNII, SNII? or ?), and random field galaxies. An asterisk next to a redshift value denotes a redshift obtained from a single identified line.

Name	RA (J2000)	Dec (J2000)	z	ID
